1. Purpose and Positioning

Purpose
The purpose of the Customer Survey System (CSS) is to provide a centralized, structured, and secure platform for collecting, managing, analyzing, and reporting customer feedback.

Positioning
Currently, ICT manages Survey where customer provides feedback regarding their stay in our Hotel Branches.

The Customer Survey System is positioned as a **strategic customer experience management tool** that supports business intelligence and continuous improvement initiatives.

2. Phase-2 Business Objectives

This section outlines the specific business objectives and success metrics targeted for this implementation phase. These objectives are binding for scope, acceptance, and performance validation.

ID	Business Objective	Description	Success Metrics
BO-01	Improve Customer Satisfaction Measurement	Establish a standardized and reliable mechanism for capturing customer feedback to accurately measure customer satisfaction levels across products, services, and departments.	Improved visibility into customer sentiment
BO-02	Centralize Customer Feedback Data	Eliminate fragmented survey tools and spreadsheet-based tracking by consolidating all customer survey data into a single, secure platform.	Improved data integrity and consistency
BO-03	Enable Real-Time Reporting and Analytics	Provide management and business users with real-time dashboards and	Data-driven performance management

GOLI - CONFIDENTIAL

		automated reporting capabilities.	
BO-04	Increase Customer Engagement and Response Rates	Enhance survey accessibility and distribution methods to improve customer participation.	Higher response rates
BO-05	Improve Operational Efficiency	Automate survey creation, distribution, and reporting processes to reduce manual workload.	Faster survey turnaround time
BO-06	Ensure Regulatory Compliance and Data Security	Implement appropriate data protection measures to ensure compliance with applicable data privacy regulations and internal governance policies.	Secure storage and processing of customer data

3. Scope

In-scope

- Survey Management
- Survey Distribution
- Response Management
- Reporting and Analytics
- User and Access Management
- Security and Compliance

Out-of-scope

- Full Customer Relationship Management (CRM) replacement
- Marketing automation platform replacement
- Social media sentiment analysis integration
- AI-based predictive analytics (future enhancement)
- Development of native mobile applications
- Data warehouse redesign

4. Functional Business Requirements

FBR4.1 Survey Management Requirements

- The system shall support multiple question types:
- The system shall allow authorized users to create, edit, preview, publish, and archive surveys.
- The system shall allow users to define mandatory and optional questions
- The system shall allow survey scheduling (start date and end date).
- The system shall support reusable survey templates and question libraries.

GOLI - CONFIDENTIAL

- The system shall allow duplication of existing surveys for reuse.

FBR4.2 Survey Distribution Requirements

- The system shall distribute surveys via email.
- The system shall generate shareable survey links.
- The system shall support QR code generation for surveys.
- The system shall allow reminder notifications to non-respondents.
- The system shall track survey delivery and open rates.

FBR4.3 Response Management Requirements

- The system shall capture survey responses in real time.
- The system shall store responses in a centralized database.
- The system shall prevent duplicate submissions (where applicable).
- The system shall timestamp all survey responses.
- The system shall allow respondents to partially complete and resume surveys (optional feature).

FBR4.4 Reporting and Analytics Requirements

- The system shall generate trend analysis over time.
- The system shall provide real-time dashboards.
- The system shall allow filtering of results by date, location, or survey type.
- The system shall allow export of reports in CSV/Excel/PDF format.

FBR4.5 User and Access Management Requirements

- The system shall implement role-based access control (e.g., Admin, Manager, Viewer).
- The system shall allow administrators to create, edit, and deactivate user accounts.
- The system shall maintain audit logs of user activities.

FBR4.6 Data Management Requirements

- The system shall securely store all survey and response data.
- The system shall allow data export for backup or integration purposes.
- The system shall support data retention and archival policies.

5. Non-Functional Requirements

NFR5.1 Performance

- System response time shall not exceed 3 seconds under normal load.
- System shall support concurrent users as defined by business capacity planning.
- Survey submission processing shall occur in real time.
- Dashboard reports shall load within acceptable performance thresholds.

GOLI – CONFIDENTIAL

NFR5.2 Availability and Reliability

- System availability shall be at least 99% uptime (excluding planned maintenance).
- System shall support automated backup and disaster recovery.
- Data recovery procedures shall ensure minimal data loss.

NFR5.3 Security Requirements

- Data shall be encrypted in transit (HTTPS).
- Sensitive data shall be encrypted at rest.
- Role-based access control shall be enforced.
- System shall maintain audit logs of user activity.
- System shall comply with applicable data privacy regulations.

NFR5.4 Usability Requirements

- User interface shall be intuitive and require minimal training.
- System shall support major web browsers.
- Interface shall be responsive across desktop and mobile devices.

NFR5.5 Scalability and Maintainability

- System architecture shall support future feature expansion.
- System updates shall not disrupt core functionality.
- Configuration settings shall be manageable by administrators.

NFR5.6 Backup and Recovery

- Regular automated data backups shall be performed.
- The system shall allow data restoration in case of system failure.

6. Reporting Requirements

6.1 Standard Reports

- Response Rate Report
- Customer Satisfaction Score (CSAT)
- Net Promoter Score (NPS)
- Survey Completion Rate
- Trend Analysis by Date

6.2 Dashboard Requirements

- Real-time graphical dashboards
- Filter options (date range, department, location)
- Drill-down functionality for detailed insights

GOLI - CONFIDENTIAL

6.3 Data Export

- Export reports in:
  - CSV
  - Excel
  - PDF

6.3 Scheduled Reports

- Automated report generation
- Email delivery of scheduled reports

7. Risks and Mitigation

Risk	Description	Mitigation Strategy
Scope creep due to additional feature requests	Budget and timeline overrun	Implement strict Change Control process
Delays in development or integration	Project timeline extension	Define clear milestones and monitor progress
Incorrect reporting results	Poor data quality	Enforce validation rules and mandatory fields
Security Risks	Unauthorized access or data exposure.	Enforce authentication, and regular security reviews.
Reduced feature implementation	Budget constraints	Prioritize mandatory requirements
Inaccurate customer insights	Low survey response rate	Use reminders and multi-channel distribution
Low system utilization	Resistance to system adoption	Provide training and change management support
Incorrect reporting results	Poor data quality	Enforce validation rules and mandatory fields
Business disruption	System downtime	Implement backup and disaster recovery plan
Reputational and legal damage	Data breach or unauthorized access	Enforce encryption, RBAC, and security audits
Regulatory penalties	Non-compliance with data privacy regulations	Implement data retention policies and compliance checks
Governance issues	Inadequate audit logging	Maintain detailed system activity logs

8. Dependencies

The successful implementation and operation of the CSS depend on several internal and external factors.

GOLI - CONFIDENTIAL

8.1 Standard Reports

- Availability of server or cloud infrastructure
- Stable internet connectivity
- Email server configuration for survey distribution
- Database management system readiness
- Integration readiness with CRM or customer database

8.2 Organizational Dependencies

- Availability of business stakeholders for requirement validation
- Timely approval of requirements and scope
- User participation in training and UAT
- Availability of IT support resources

8.3 External Dependencies

- Compliance with applicable data privacy regulations
- Third-party service providers (e.g., email gateway, hosting provider)
- Vendor support (if external development tools are used)

8.4 Operational Dependencies

- Defined data governance policies
- Accurate customer contact data
- Defined survey strategy and feedback objectives

9. Acceptance Criteria

9.1 Functional Acceptance Criteria

- All mandatory functional requirements are fully implemented.
- Surveys can be successfully created, edited, published, and archived.
- Survey responses are captured in real time and stored in the centralized database.
- Reports and dashboards generate accurate data and metrics.
- Role-based access control restricts users according to assigned roles.
- Data export functionality (CSV/Excel/PDF) operates correctly.

9.2 Non-Functional Acceptance Criteria

- System response time does not exceed defined limits (e.g., ≤ 3 seconds under normal load).
- System uptime meets availability target (e.g., 99%).
- Data is encrypted in transit and at rest.
- Audit logs capture user activities.
- Security testing confirms no critical vulnerabilities.

GOLI CONFIDENTIAL

9.3 Data Validation Criteria

- Survey responses are stored accurately without data loss.
- Calculated metrics (e.g., Response Rate, CSAT, NPS) are mathematically correct.
- Duplicate submissions are prevented or properly flagged (where applicable).
- Timestamp and metadata are correctly recorded.

9.4 User Acceptance Criteria

- User Acceptance Testing (UAT) is completed with documented results.
- No unresolved critical or high-severity defects remain.
- Business Owner formally approves deployment.

GOLI - CONFIDENTIAL

10. Test Case Scenarios

10.1 Survey Management Test Cases

TC ID	Scenario	Test Steps	Expected Result
TC-001	Create Survey	Create survey with multiple question types	Survey saved successfully
TC-002	Publish Survey	Publish active survey	Survey becomes accessible via link
TC-003	Edit Survey	Modify survey before publishing	Changes saved correctly
TC-004	Archive Survey	Archive completed survey	Survey status changes to archived

10.2 Response Management Test Cases

TC ID	Test Scenario	Expected Result
TC-005	Submit Response	Response stored and timestamped
TC-006	Prevent Duplicate Submission	System blocks or flags duplicate entry
TC-007	Partial Completion (if enabled)	User can resume survey
TC-008	Real-Time Capture	Dashboard updates upon submission

10.3 Reporting and Analytics Test Cases

TC ID	Test Scenario	Expected Result
TC-008	Role-Based Access	User access restricted by role
TC-009	Secure Login	Unauthorized users cannot access system
TC-010	Audit Log Verification	User actions recorded in logs

10.4 Performance Test Cases

TC ID	Test Scenario	Expected Result
TC-011	Concurrent Users	System remains stable under load
TC-012	Page Load Speed	Pages load within defined time limits

Business Requirements Document (BRS) - Approval and Endorsement

Approval Statement

By signing this document, the undersigned confirm that:

- This Business Requirements Specification accurately represents Global Officium Limited Inc's business objectives, requirements, constraints, and acceptance criteria.
- All requirements contained herein have been reviewed, validated, and approved by authorized stakeholders.
- This BRS constitutes the **authoritative contractual baseline** for scope, acceptance, change control, and vendor performance.
- Any modification to the requirements defined in this document shall be subject to formal change control and written approval by Global Officium Limited Inc.
- Approval of this BRS does not waive Global Officium Limited Inc's rights under applicable laws, regulations, or contractual agreements.
